✨ AI Content Generator

📌 About the Project

The AI Content Generator is a beginner-friendly Python project that generates content for different purposes using a simple Gradio web interface.

Users can enter a topic, select a content type, and choose a writing tone to generate suitable text.

🎯 Objectives

- Create a simple and user-friendly content generation interface.
- Generate text for different content formats.
- Allow users to choose different writing tones.
- Practise Python programming and interface development.

🚀 Features

- Instagram captions
- Blog introductions
- Product descriptions
- YouTube descriptions
- Motivational posts
- Multiple tone options: Professional, Friendly, Creative, and Casual
- Interactive web interface using Gradio

🛠️ Technologies Used

- Python
- Gradio
- Google Colab

⚙️ How It Works

1. Enter a topic.
2. Select the desired content type.
3. Choose a writing tone.
4. Click Generate Content.
5. View the generated text in the output section.

▶️ How to Run

1. Open the project notebook in Google Colab.

2. Run the code cell.
3. Wait for the Gradio interface to launch.
4. Open the generated Gradio link.
5. Enter a topic and generate content.

📸 Project Demo

Screenshots of the working interface and generated output will be added to this repository.

📚 Learning Outcomes

This project helped me practise Python functions, dictionaries, user inputs, conditional logic, and building a web interface with Gradio.

⚠️ Note

This version uses predefined text templates. It does not connect to a live generative AI model.

👩‍💻 Author

Created as a beginner-level Python project for learning and practical experience.
